# CONTINUUM® PUMP series

Helical rotors pumps for high pressure  
and no noise application

The new generation of gear pumps for  
**NO PULSATION & NO NOISE**

INDUSTRIAL

MOBILE

MARINE

## Continuum® pump

Achieves better efficiency, lower production cost, better life quality for the industrial world.  
*Ottiene alti livelli di efficienza, ridotti costi di produzione ed una migliore qualità del lavoro.*

Reducing noise in the workplace has become a necessity for many companies. By now most companies have recognized noise as a cost weighting on the economics of their businesses. Noise pollution remains a serious problem to be solved for both stationary and mobile machinery. Hydraulic pumps, above all those for high pressure, entail unacceptable noise and/or vibration levels in many different applications.

Up to now the noise problem has always been approached in the only possible way: with secondary and expensive activities such as using pulsation dampers, hoses, damping rails and rings, encapsulating the hydraulic components or the entire system and so on.

SETTIMA decided to start to design a new gear pumps generation capable to reduce as much as possible the acoustic emissions and the consequent vibration level. Some years ago the result was the **Continuum® pump series**, able to reduce down to 52 dB(A) the normal operation noise.

Today SETTIMA presents the new generation of **Continuum® pumps**, silent as always, but much more efficient and with longer lifetime even at heavy duty, at all pressure and speed ranges.

The most important economic benefits of using **Continuum® pumps** are:

- very low pump pulsations reduce dramatically also vibrations with no dispersion of energy,
- saving money respect to the more expensive traditional pumps such as piston pumps and internal gear pumps,
- high volumetric efficiency, also at very low speed, contributes to cost reduction and also enables the pump to be driven by motor at a variable velocity with consequent energy saving,
- cost saving by eliminating second noise reduction measures,
- keeping the same external dimensions of gear pump, with no necessity to redesign the system in case of replacement.

### COMPETITIVE ANALYSIS

**Continuum® pump** is a valid alternative to silently replace different traditional solutions of noisy high pressure pump.

**Continuum® pump** can replace the following types of high pressure pump:

- External gear pumps
- Internal gear pumps
- Fixed displacement vane pumps
- Fixed displacement piston pumps

Please contact Settima for all information about any possible replacement.

### ORIGIN OF NOISE AND VIBRATIONS KNOCKED DOWN BY CONTINUUM® PUMP

#### **LA POMPA CONTINUUM® HA ELIMINATO LE ORIGINI DEL RUMORE E DELLE VIBRAZIONI**

The typical sound emissions of gear pumps have two distinct origins: mechanical noise and hydraulic noise. The mechanical noise is what can be expected from any pair of gears. The hydraulic noise, however, is generated by the perturbations of fluid pressure through the pump. This noise and/or vibration comes from three basic components:

- cavitation, that can cause serious noise in addition to structural damage to mechanical components
- the peak pressure that arises from trapping of fluid between the top and the bottom of the tooth,
- the "ripple" or the flow pulsation during meshing that causes pressure pulsation.

The continuous contact helical rotor **Continuum® pump** has solved these problems with sophisticated and efficient systems.

### THINK DIFFERENT: THE SILENT AND UNIQUE REVOLUTION OF CONTINUUM® PUMP

#### **UNA RIVOLUZIONE SILENZIOSA: LA POMPA CONTINUUM®**

As for classic gear pumps, the transport flow is perpendicular to the axes, but the rotors profile, specially developed and internationally patented, does not trap any volume since the helical design of the profile plays the role of completing an overlap, making a gentle transmission of fluid resulting in a dramatic reduction of pulsation. There is just a single point of contact between the profiles

during rotation, which eliminates the pockets acting on the axial thrust washer and the noise associated with this problem.

**The Continuum®** core and its technological innovation is based on three patented breakthroughs:

- The rotor profile
- The screw step
- The inner force balancing.

## MANUFACTURING ACCURACY IN ANY DETAILS

**MASSIMA ACCURATEZZA NEI DETTAGLI**

**SETTIMA** produces hydraulic pumps since over thirty years, achieving a high level of competence and accuracy in the manufacture of high-precision pump drives. Together with top production machineries, efficient test environments, 3D drawing capability and special materials for rotors and bushings, **SETTIMA** constantly achieves products of high quality that is the industry standard.

## CONTINUUM® PUMP ADVANTAGES

**VANTAGGI DELLA POMPA CONTINUUM®**

- Low noise also at high speed (up to 6.500 RPM).
- Average of 15 db(A) less noisy than standard external gear pumps.
- Reduced noise level for the machine operator and surroundings.
- Cost saving by eliminating second noise reduction measures.
- Easy to replace thanks to compatibility with all external gear pumps.
- Helps meet legal noise requirements.
- Continuous variable flow rate (0% to 100%).
- Undirectional pump and/or bi-directional pump/motor.
- Intermittent operation at high pressure & low speed.
- Allowed to be driven by servo motors or asynchronous motors.
- High volumetrical efficiency.
- Fast reverse RPM allowed: CCW max < 400.
- Response time < 100 ms due to very small internal mechanical inertia.

## Applications / Applicazioni

INDUSTRIAL	MOBILE	ENVIRONMENTAL INDUSTRY	MARINE
Machine tools lubrication systems.	Ground-handling equipment.	Baler and compacting of waste.	Marine power hydraulics.
Lifting equipment, hydraulic systems for dock-levelers.	Agricultural machinery.	Containers.	Rudder actuators (tandem system).
Hydraulic transmission systems.	Hydraulic systems for parking systems.	Hooklift containers.	Propeller pitch control.
Machines lubrication.	Steering units.	Back loading containers.	Propeller drive (power transmission from engine).
Chemical metering.	Torque converters & power-shift transmissions.	Front loading containers.	Rotary vane steering gears.
Hydraulic systems for injection moulding machines, presses, compactors and balers.	Street-sweeping vehicles.	Liftdumper containers.	Minipowerpacks (dock operation, door control).
Systems for lubrication and cooling of gearboxes and bearings.	Shredder systems.	Hooklift systems.	Yacht building industry (lifting systems: fly bridge cranes, tenderlift, elevator, walkways, automatic swimming ladders, side boarding ladders, pitch controls and operations, hydraulic davits).
Hydraulic powerpack.	Waste container level lifter.	Garbage trucks.	
Hydro power.		Mobile compactors.	
Feeder system for filter circuits, cooling circuits, lubrication applications, pump transfer unit.		Stationary compactors.	

## Technical characteristics / Caratteristiche tecniche

**SPECIAL HELICAL ROTORS – CONTINUUM®** represents an innovative and revolutionary gear pump. The patented profile of the **Continuum®** rotors permits just a single point of contact between gears: this results, together with a particular screw step and inner force balancing, in the total absence of trapped and compressed oil, and leads to no noise and no pulsation.

**HIGH PRESSURE – CONTINUUM®** has been designed for high pressure, high speed and heavy duty.

**TANDEM GROUP – CONTINUUM®** can be also assembled as a double pump, connecting two pumps from different groups: from group 1 to group 4.

## Technical characteristics

\* Please Contact Settima for SX counter clockwise optional rotation.

Contattare Settima per rotazione SX opzionale.

### DIRECTION OF ROTATION / SENSO DI ROTAZIONE

**Continuum®** pumps are available with right rotation as standard configuration and left rotation as optional configuration. Right hand rotation means that, when standing in front of the pump, with driving shaft towards to the observer, the pump is rotating clockwise (DX). The other way around with left hand rotation, counter clockwise (SX).

Le pompe **Continuum®** sono fornite con la configurazione standard di rotazione destra. Opzionale la rotazione sinistra. Con rotazione destra (DX) si intende che, guardando la pompa frontalmente, con l'albero conduttore sporgente verso il punto di osservazione, la rotazione sarà in senso orario, con il lato mandata sulla destra e il lato aspirazione sulla sinistra della pompa. Viceversa per quanto riguarda la rotazione sinistra (SX).

**Continuum®** pumps, despite the type of configuration , can rotate to the opposite side if the pressure is not higher than 10% of maximum continuous pressure (check the Technical Characteristics table).

Le pompe **Continuum®**, qualunque configurazione di rotazione abbiano, possono ruotare in senso inverso a pressioni non superiore al 10% della massima pressione continua (verificare nella tabella delle caratteristiche tecniche).

DX: Clockwise rotation / Rotazione destra

SX: Counter clockwise rotation / Rotazione sinistra

# Tandem & multiple pumps / Pompe doppie e multiple

**Continuum®** pumps are suitable for multiple setups, whereby the drive shaft of the first pump is extended to a second and even a third **Continuum®** pump. Each pump is connected to another by means of coupling. Each pump has its own suction port. Basically the technical specifications of single pumps apply also to multiple setups\*\*. The maximum speed is determined by the highest pump speed rate in use. In case of multiple setup configurations, it is recommended to use the largest displacement for the first pump. The front pump may be equipped with different types of flange and shaft.

\* Please contact Settima for SX counter clockwise optional rotation. Contattare Settima per rotazione SX opzionale.

\*\* The minimum operating pressure recommended for the second stage is 30 bar. In case of lower pressure, please, contact Settima. Minima pressione di funzionamento consigliata per il secondo stadio 30 bar, al di sotto, contattare Settima.
